SUMMARY

Self-taught full-stack engineer, writing software since 2016. Sole technical owner of a \$1M+ e-commerce operation since 2021. Designing for least-friction: ultra-fast, easy-to-use workflows that save hundreds of hours a month.

EXPERIENCE

East Coast Drywall Tools

AUG 2021 – PRESENT

Software Engineer

- Enabled 4x annual revenue growth, from \$250K to over \$1M in 12 months, by taking the company from no online presence to 25+ orders per day with integrated sales and fulfillment systems.
- Sole engineer for the e-commerce and logistics stack, in production since 2021 and operated daily by non-technical staff; gather requirements, write documentation, train staff, and maintain every system.
- Built **Priceprint** in 3 days: a barcode-scanning PWA that keeps retail shelf pricing in sync with Shopify and prints grouped labels through LabelLIVE. Saves dozens of hours weekly and nearly eliminates pricing errors.
- Built **Flashpart**, a guided photo-capture tool that creates Shopify products for hundreds of near-identical parts, cutting product creation time by up to 90%.
- Built **Schematimaker**, a tool that converts PDF part schematics into interactive HTML for the storefront, cutting creation time from hours to minutes.
- Built a **profit tracker** that unifies Amazon, eBay, and Shopify order data via REST APIs and calculates true margins after fees and shipping, cutting manual reporting work by more than 50%.
- Handled all IT and infrastructure for the operation, including hardware upgrades, software rollouts, and internal support.

PROJECTS

Homelab. Long-running Ubuntu infrastructure: Dokploy, GitHub Actions deployments, Docker services, Home Assistant, Pi-hole, and custom apps I build and operate end to end.

Invokify. Open-source Python library that turns decorated functions into parsable CLI commands; published on PyPI.

SKILLS

LANGUAGES	TypeScript	JavaScript	Python	SQL	HTML/CSS
FRAMEWORKS	React	Node.js	PWAs		
DATA & APIS	Convex	SQLite	PostgreSQL	REST APIs	Shopify / Amazon / eBay APIs
INFRASTRUCTURE	Docker	Linux (Ubuntu)	GitHub Actions (CI/CD)	Dokploy	Vercel
WORKFLOW	Git / GitHub	Agentic development (Cursor)	Least-friction UX design		

EDUCATION

Homeschool High School Diploma / Self-directed software education since 2016

GRADUATED 2020
